

Skirt Board

Boral TruExterior® Trim

Boral TruExterior® Trim and its complementary Skirt Board profile are pioneering a new category of exterior trim with products you can trust to provide exceptional performance, superior workability and a lasting appearance. Boral TruExterior® Trim maintains a high level of dimensional stability during periods of temperature and moisture change†. Plus, as a low maintenance product, Boral TruExterior® Trim provides contractors additional freedom while resisting termite attacks and moisture related issues that typically plague wood trim such as cracking, splitting and rotting.

Skirt Board

The new Skirt Board profile is the perfect complement to cedar, fiber cement and other siding products, as it is suitable for ground contact and can be used to create the required clearance between siding and grade. Designed to nestle behind siding with an integrated drip edge to prevent water from flowing back toward the foundation, Boral TruExterior® Trim Skirt Board is a great water management solution. Skirt Board is available with a smooth or wood grain face.
