Fencing – Patterns

<u>Pattern Number</u>	<u>Coverage Factor</u>	<u>J&W has knives</u>	<u>Pattern</u>
-----------------------	------------------------	---------------------------	----------------

DEFINITIONS AND DISCLAIMERS

Actual thickness and width of final product may vary from the measurements listed in this catalog. Attributes that contribute variable sized measurements include the lumber species, whether the starting material is made out of rough, or surfaced, green, or dry among other variables.

Coverage Factor: Multiply the “coverage factor” by the number of square feet you need to cover in order to estimate how many Lineal Feet of this board you need, add three to five percent for downfall. Quantities may also vary based on how material is installed including gapping etc.

[The coverage factor itself is calculated by dividing 12 by the coverage area of the board. For example the coverage factor of a board that has 5 ½” coverage is 2.18 (12/5.50)].

J&W Has Knives,  = J&W’s mill has knives on hand for these patterns for **softwood** material. No additional knife making fee should be needed (subject to confirmation).

J&W Has Knives,  + = J&W’s mill has carbide knives on hand for these patterns that can be used on **softwood or hardwood** material. No additional knife making fee should be needed (subject to confirmation).

 = Information complements California Redwood Association

WRCLA = Information complements Western Red Cedar Lumber Association

EE = Eased edge.

S1S = Surfaced one side, meaning the visible side will have a smooth surfaced texture.

S2S = Surfaced two sides, two sides will have a smooth surfaced texture.
